

Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

1. Ideation

Problem Statement

The current IT procurement process lacks efficiency and automation, creating delays and manual overhead in handling standard laptop orders. Standard laptop requests may require configuration, and this step can be overlooked or delayed.

User Need

IT procurement team members need a streamlined ordering process in which configuration work is automatically generated and assigned to the hardware team.

Proposed Idea

Use ServiceNow Flow Designer to automate creation of a Catalog Task after approval of a standard laptop request, with the task assigned to the Hardware group.

Expected Benefits

- Timely configuration of standard laptops.
- Reduced manual intervention and potential errors.
- Improved task allocation and resource utilisation.
- Improved efficiency and productivity in IT procurement.

Ideation Inputs Not Provided

- Team members, team ID, workshop date, interview participants, and formal brainstorming-session records are not provided in the source PDF.

Source basis: the supplied 10-page Project 2 PDF. Fields not supported by the source are explicitly identified as not provided.
