

Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

3. Solution Design

Solution Overview

The design uses a ServiceNow Service Catalog item and Flow Designer. After a Standard Laptop request is submitted and approved, the flow creates a Catalog Task, sets the task details, and assigns it to Hardware.

Flow Design

- Flow name: Standard laptop task.
- Application: Global.
- Run as: System user.
- Trigger: Service Catalog.
- Action: Create Catalog Task.
- Request item: Requested Item Record.
- Short description: Laptop need to Configured.
- Description: Laptop need to Configured.
- Assignment group: Hardware.
- Approval: Approved.

Catalog Configuration

- Open Maintain Items and select Standard Laptop.
- Under Process engine, remove the remaining automations as instructed in the source.
- Add the Standard Laptop Task flow.
- Save the record.

Process Flow

Standard Laptop order → approval → Standard Laptop Task Flow → Create Catalog Task → task assigned to Hardware → Hardware can see the task details and configuration requirement.

Design Note

The source does not provide a separate architecture diagram, database design, integration design, or UI mock-up. The process above is derived directly from the documented ServiceNow steps.

Source basis: the supplied 10-page Project 2 PDF. Fields not supported by the source are explicitly identified as not provided.
